### **DETAILED ACTION**

1. This action is in response to the amendment filed on 3/11/08.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Axinti et al. (4,688,468) for the same reasons as set forth in the previous office action mailed 11/15/07.

#### ***Response to Arguments***

3. Applicant's arguments filed 3/11/08 have been fully considered but they are not persuasive. Applicant contends that Axinti fails to disclose that the transmission piston is in contact with the tool either directly or indirectly at least during the stress pulse generation; and that the piston is pushed in the direction of the tool compressing the tool in its longitudinal direction and thus generating a stress pulse in the tool. This is not found persuasive, as claims are given their broadest reasonable interpretation consistent with the specification. In this instance, it is the Examiner's position that Axinti, at one point of the operation, while the piston strikes the tool, said piston is in direct contact with the tool and does compress said tool in its longitudinal direction. Furthermore, the claim does not describe any specific structure to perform such function. In claim 1, last three lines, merely recite "pushes the transmission piston ... , compressing the tool ... and thus generating a stress pulse in the tool. It is the examiner's

Art Unit: 3721

position that Axintin, indeed, shows a transmission piston that is capable of performing the recited function that applicant is referring to.
